This guide is reorganized from the uploaded CRICKSTATS project document. The source describes a Salesforce application using custom objects, relationships, reports, dashboards and automation. ■filecite■turn0file0■L2-L13■

Cricket Player Performance Tracking Application : CRICKSTATS

User Story:

As a Salesforce Admin, I want to create a comprehensive player performance tracking application within Salesforce to capture and analyze detailed match-by-match information of cricket players. This application will include custom objects such as Player and Match Performance with carefully defined fields and relationships to ensure data integrity and accessibility. By leveraging master-detail and lookup relationships, the application will enable robust tracking of individual and team performances, facilitate insightful reporting and analytics, and support the overall management of player statistics, thereby enhancing strategic decision-making and player development initiatives.

1. INTRODUCTION

1.1 Project Overview :

CRICKSTATS is a Salesforce-based application designed to track, manage, and analyze cricket players' performance on a match-by-match basis. The system uses custom objects, relationships, dashboards, and automation tools to provide structured performance insights.

It enables coaches, analysts, and administrators to record player statistics, generate reports, and support strategic decision-making.

1.2 Purpose :

The main purpose of this project is:

To digitize player performance records

Example image – project overview from the supplied document.

1. Project Overview

• CRICKSTATS is a Salesforce-based application for tracking cricket player performance match by match.

• The application uses custom objects, relationships, reports, dashboards and automation.

• Main users described in the source are coaches, analysts, team managers and Salesforce administrators.

2. Team Work Plan

• Leader – GUNASUNDARI .P: coordinate the project, Salesforce setup, module integration and final testing.

• Member 1 – REVATHI .D: create the Player object, Player fields, tabs and related configuration.

• Member 2 – KEERTHANA .K: create Match Performance, relationships, roll-up summaries, flow and reporting.

• All members: enter sample records, test the application, capture screenshots and prepare the final submission.

3. Step 1 – Create Salesforce Developer Account

• Open the Salesforce Developer signup page mentioned in the source document.

• Enter first name, last name, email, role as Developer, college/company, country, postal code and a suitable username.

• Submit the signup form.

• Open the verification email and activate the account.

• Create a password and security question, then enter the Salesforce Setup page.

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details :

1) First name & Last name
2) Email
3) Role : Developer
4) Company : College or Company Name
5) County : India
6) Postal Code : pin code
7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format : username@organization.com

Click on sign me up after filling these.

Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account.

Example screenshot from the supplied CRICKSTATS document.

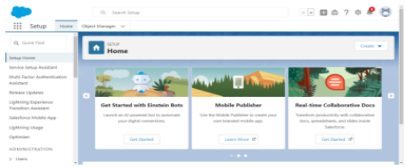

4. Step 2 – Create the Player Object

• Open Setup → Object Manager → Create → Custom Object.

• Label: Player; Plural Label: Players.

• Record Name: Player Name; Data Type: Text.

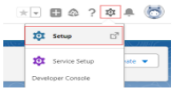

• Enable the required optional features such as Reports, Activities and Field History, then save.

Milestone 2 - Object Creation

Activity 1 : Player Object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

Example screenshot from the supplied CRICKSTATS document.

5. Step 3 – Create the Match Performance Object

• Open Setup → Object Manager → Create → Custom Object.

• Label: Match Performance; Plural Label: Match Performances.

• Use a Text record name and enable the required optional features.

• Save the object.

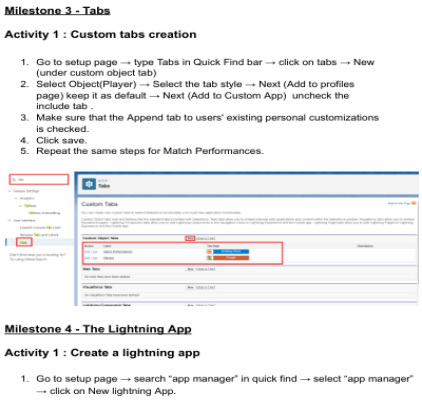

6. Step 4 – Create Custom Tabs

• Open Setup and search for Tabs.

• Create a custom tab for Player and select a suitable tab style.

• Repeat the same process for Match Performances.

• Keep the personal-customization option enabled as described in the source.

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)
2. Select Object(Player) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Match Performances.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search "app manager" in quick find → select "app manager" → click on New lightning App.

Example screenshot from the supplied CRICKSTATS document.

7. Step 5 – Create the CRICKSTATS Lightning App

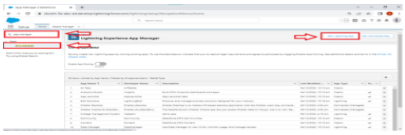

• Open App Manager → New Lightning App.

• App Name: CRICKSTATS.

• Use Standard Navigation and support Desktop and Phone.

• Add Players, Match Performances, Reports and Dashboards to Navigation Items.

• Add the System Administrator profile and finish the app.

2. Fill the app name in app details and branding as follow
   App Name : CRICKSTATS
   Developer Name : Auto Populates
   Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.
   Then click Next.

3. In App options
   Navigation style : Standard navigation
   Setup experience : setup
   Supporters form factors : Desktop and phone
   Then click Next

4. In Utility items
   Utility Bar alignment : Default
   Then click Next.

5. Navigation items
   Select the created Custom Objects and required standard objects
   - Players
     Match Performances
     Reports
     Dashboards

Example screenshot from the supplied CRICKSTATS document.

8. Step 6 – Create Player Fields

• Open Object Manager → Player → Fields & Relationships → New.

• Create Player Name, Player Number, Profile Picture, Date of Birth, Role, Batting Style, Bowling Style, Nationality and Team.

• Create AVG Score as a Formula field returning Number using the formula supplied in the source.

• Create the Lookup Relationship to Match Performance specified in the source.

Milestone 5 : Fields & Relationships

Activity 1 : Create Custom fields for Player object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.
8. Data Type : **Text**
   Field Label: Player Name
   Field Name : Auto Populates
   Length : 50
   Click on Next → Next → Save and new.

Example screenshot from the supplied CRICKSTATS document.

9. Step 7 – Create Match Performance Fields

• Create Match Performance Name (Text).

• Create Player of the Match (Checkbox).

• Create Match Result (Picklist): WON, LOST, DRAW.

• Create Runs Scored, Balls Faced, Fours, Sixes, Overs Bowled, Wickets Taken, Runs Conceded, Maiden Overs, Stumpings and Catches as Number fields.

• Create Player as a Master-Detail Relationship to the Player object.

10. Step 8 – Create Roll-Up Summary Fields

• On Player, create Matches Played using COUNT of Match Performances.

• Create Number of 50’s and Number of 100’s using COUNT with the required filter criteria.

• Create Total 4’s and Total 6’s using SUM.

• Create Total Runs using SUM of Runs Scored.

• Create Total Overs using SUM of Overs Bowled.

• Create Total Wickets, Total Stumpings and Total Catches using SUM of the corresponding Match Performance fields.

Field Name : Auto Populates
Click on Next → Next → Save and new.

3. Data Type : **Picklist**
   Field Label: Match Result
   Field Name : Auto Populates
   Value : Enter value, with each value separated by a new line
   WON
   LOST
   DRAW
   Click on Next → Next → Save and new.
4. Data Type : **Number**
   Field Label: Runs Scored
   Field Name : Auto Populates
   Click on Next → Next → Save and new.
5. Data Type : **Number**
   Field Label: Balls Faced
   Field Name : Auto Populates
   Click on Next → Next → Save and new.
6. Data Type : **Number**
   Field Label: Fours
   Field Name : Auto Populates
   Click on Next → Next → Save and new.
7. Data Type : **Number**
   Field Label: Sixes
   Field Name : Auto Populates
   Click on Next → Next → Save and new.
8. Data Type : **Number**
   Field Label: Overs Bowled
   Field Name : Auto Populates
   Click on Next → Next → Save and new.
9. Data Type : **Number**
   Field Label: Wickets Taken
   Field Name : Auto Populates
   Click on Next → Next → Save and new.

Example screenshot from the supplied CRICKSTATS document.

11. Step 9 – Build the Player Screen Flow

• Go to Setup → Flow → New Flow → Screen Flow.

• Create a screen called Players screen and add a Team picklist.

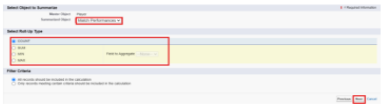

• Create a Picklist Choice Set using the Player object's Team field.

• Use Get Records to retrieve Player records where Team equals the selected Team.

• Add a Data Table screen component and display the required player columns.

• Save the flow as Player Flow.

4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist. Click Next,
6. Choose a data type as **Roll-up Summary**. Click Next.
   Field Label: Matches Played
   Field Name : Auto Populates
   Summarized Object : Match Performances
   Select Roll-up Type : COUNT

Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

- Data Type : Roll-up Summary
  Field Label: Number of 50's
  Field Name : Auto Populates
  Summarized Object : Match Performances
  Select Roll-up Type : COUNT
  Filter Criteria : Only records meeting certain criteria should be included in the calculation.
  Click on Next → Next → Save and new.

Example screenshot from the supplied CRICKSTATS document.

12. Step 10 – Add the Flow to the Home Page

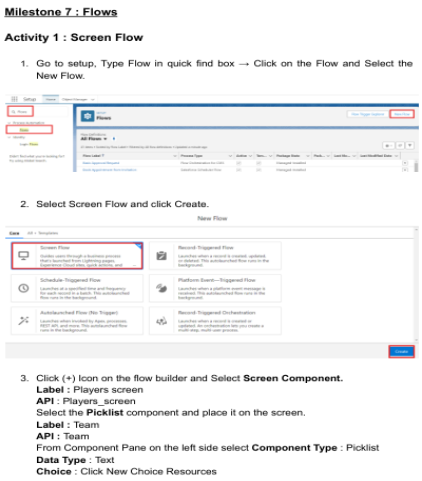

• Open the CRICKSTATS app and personalize the navigation bar.

• Add Home Page.

• Remove unnecessary components and add the Flow component.

• Select the Players Flow.

• Save and activate the page, then assign it to the CRICKSTATS app.

Milestone 7 : Flows

Activity 1 : Screen Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

2. Select Screen Flow and click Create.

New Flow

3. Click (+) Icon on the flow builder and Select **Screen Component.**
Label : Players screen
API : Players_screen
Select the **Picklist** component and place it on the screen.
Label : Team
API : Team
From Component Pane on the left side select **Component Type** : Picklist
Data Type : Text
Choice : Click New Choice Resources

Example screenshot from the supplied CRICKSTATS document.

13. Step 11 – Enter Sample Data

• Enter several Player records first.

• Enter related Match Performance records for those players.

• Use realistic sample values for runs, balls, fours, sixes, overs, wickets, catches and match results.

• The source notes that records must be entered in both objects to obtain results.

14. Step 12 – Functional & Performance Testing

• Test Player and Match Performance record creation.

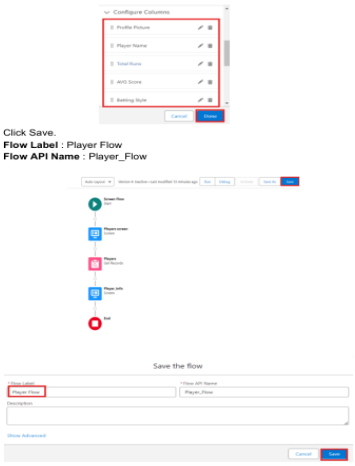

• Check mandatory fields, input limits and validation behaviour.

• Verify that roll-up summaries calculate totals correctly.

• Run the flow and verify that selecting a team displays the related players.

• Check reports and dashboards and confirm that displayed values match the entered data.

• Test response during data entry, report generation and dashboard loading.

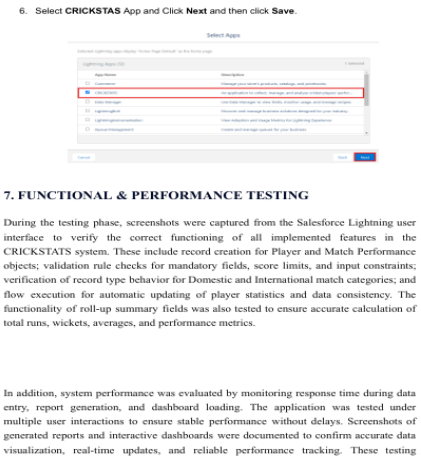

Example screenshot from the supplied CRICKSTATS document.

15. Step 13 – Final Evidence / Screenshots

• Capture screenshots of Salesforce Setup, Player object, Match Performance object, fields, relationships, roll-up summaries, Flow Builder, Home Page, sample records, reports and dashboards.

• Add a short caption under every screenshot.

• Keep screenshots in the same order as the implementation steps so the evaluator can follow the work.

6. Select **CRICKSTAS** App and Click **Next** and then click **Save**.

Select Apps

7. FUNCTIONAL & PERFORMANCE TESTING

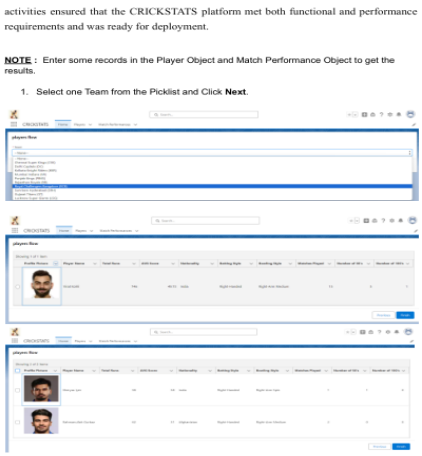

During the testing phase, screenshots were captured from the Salesforce Lightning user interface to verify the correct functioning of all implemented features in the CRICKSTATS system. These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints; verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of player statistics and data consistency. The functionality of roll-up summary fields was also tested to ensure accurate calculation of total runs, wickets, averages, and performance metrics.

In addition, system performance was evaluated by monitoring response time during data entry, report generation, and dashboard loading. The application was tested under multiple user interactions to ensure stable performance without delays. Screenshots of generated reports and interactive dashboards were documented to confirm accurate data visualization, real-time updates, and reliable performance tracking. These testing

Example screenshot from the supplied CRICKSTATS document.

16. Final Project Checklist

- ■ Salesforce developer account activated
- ■ Player object created
- ■ Match Performance object created
- ■ Custom tabs created
- ■ CRICKSTATS Lightning App created
- ■ Player fields completed
- ■ Match Performance fields completed
- ■ Relationships completed
- ■ Roll-up summaries completed
- ■ Player Flow created and activated
- ■ Sample records entered
- ■ Testing completed
- ■ Screenshots captured
- ■ Final report prepared

activities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

NOTE : Enter some records in the Player Object and Match Performance Object to get the results.

1. Select one Team from the Picklist and Click **Next**.

Example screenshot from the supplied CRICKSTATS document.

Conclusion

The source concludes that CRICKSTATS centralizes cricket performance data, supports analytics, reduces manual work and enables reporting. It also identifies future scope such as mobile integration, AI-based performance prediction, video analysis, player ranking, a public statistics portal and multi-league support. ■filecite■turn0file0■L813-L842■
